STANDARDS MATRIX

The mission of NCPDP is clear: to create and promote data interchange standards for the pharmacy services sector of the health care industry, and to provide information and resources that educate the industry and support the diverse needs of our members. As needs within the industry are identified, standards are updated to a new version or release. The following is a high-level overview of the latest version/release and/or the most commonly used of those standards and implementation guides, as well as NCPDP's Data Dictionary and External Code List. Additionally, this document provides version/release/publication reference charts for approved and draft NCPDP standards/implementation guides.

Legend for the reference charts:

Column 1

Contains the Name of the Standard or Implementation Guide document.

Ballot Info

Contains the ballot period and ballot number in which the Standard or Implementation Guide appeared for review by the NCPDP membership and materially affected parties. See <http://www.ncpdp.org/BallotsMain.aspx> or http://www.ncpdp.org/Ballot_info_non_members.aspx

"DRAFT"

D = Any level of work in progress

Blank = (not applicable)

F = Failed Ballot

"Publication Date"

Contains the date approved by the NCPDP Board of Trustees

"Approved NCPDP"

NCPDP Board of Trustees approved and date of approval

"Approved ANSI"

ANSI = American National Standards Institute approved and date of approval

"Comment"

Contains applicable information.

Republication pertains to a new issuance of the same version/release of the standard/implementation guide with minor changes.

"Data Dictionary/ECL/ASC X12N Version"

Contains the effective date of the NCPDP Data Dictionary and the publication date of the External Code List (ECL) that supports the Standard, and/or the ASC X12N Version that should be referenced.

Version Identification System

A Version/Release level reference scheme is in place for the NCPDP Standards. Editorial changes within an Implementation Guide, additions of Frequently Asked Questions, and all modifications made to provide clarity to the standard are considered publication changes. Publication changes do not impact a Standards Version enumeration. Publication changes are so noted on the publication page of the standard and within this matrix. Any additions, deletions, or modifications to the Implementation Guide that makes a substantive difference to the standard must be approved by process of a ballot. Changes/addition/deletion of values that reside in the External Code List do not require the ballot process and do not have any impact on a Standards Version enumeration.

Versions in Standards without Model-driven Schemas

The reference scheme consists of either a two-digit or four-digit sequential enumerator depending on the standard. For example, Version D Release 4, Version 5 Release 6 or Version Ø3 Release Ø2, Version Ø4 Release Ø1 may be assigned. The addition of a new syntax, process or any substantial change to a standard will require the assignment of a new version to the standard. All other additions/changes/deletions within the standard that are not as significant but provide more than editorial, explanatory information will require the assignment of a new release of the standard.

Versions in Model-driven Schemas

Versioning for standards with model-driven schemas are date assignments of CCYYMM that are based on the NCPDP Board of Trustees approval date and a single digit sequence number. The sequence number is the unique identification for publications of a standard with the same approval date and adds uniqueness within a date. It will start at "1" for every published version. It is **ONLY** incremented when multiple publications must occur at the same date and is assigned after the standard completes the ballot process and is approved by the Board. (**Format:** CCYYMM# where C=Century, Y=Year, M=Month, and #=Sequence Number)

For ease of identification during the ballot process, the draft standards are assigned a temporary version that aligns with the ballot number. Ballot numbers are 8-digit assignments. The first four digits identify the work group that maintains the standard or initiated the ballot and the last four digits are the sequential enumeration of ballots held within the work group. For example, ballot WG11ØØ56 is a ballot held by Work Group 11, ePrescribing and Related Transactions, and is the 56th ballot held to date by that work group.

A standard in ballot would have a temporary version of XXXX####CCYYMM (XXXX=Work Group Number) assigned. Using the example of ballot WG11ØØ56 above, the draft standard would appear as version WG11ØØ562ØXXXX ("X" in this case represent the unknown year and month of approval). Upon Board of Trustees approval, the reference to the ballot is dropped and the permanent version of the standard is assigned, 2ØXXXX1 (CCYYMM#). This string CCYYMM# is the version that will be used in the Version fields for the transport, structures, specialized, and "Standard" schemas.

Audit Transaction Standard Implementation Guide

The NCPDP Audit Transaction Standard defines the record layout for batch audit transactions between Auditors and Providers. Since the communication between these parties is two-way, the record layout for both the transmitted request and the response to the audit are defined by the standard.

What business problem is this standard trying to overcome?

Supports an electronic audit transaction that facilitates requests, responses, and final outcomes transmissions for both “Desk Top” claim audits and for in-store audit notices.

How is/could this standard be used in practical, day-to-day applications?

This standard addresses the types of communication between Auditors and Providers and allows that communication to occur in an electronic environment rather than paper-based.

To whom is this standard useful (i.e. target markets)?

Any payer who wishes to support electronic audit transactions.

Audit Transaction Standard	Ballot Info	DRAFT	Approved NCPDP	Approved ANSI	Comment	Data Dictionary /ECL/ASC X12N Version

Batch Standard Implementation Guide

The NCPDP Batch Format provides practical guidelines and ensures consistent implementation throughout the industry of a file submission standard to be used between pharmacies and processors, or pharmacies, switches, and processors. The batch file is to be submitted in a non-real-time mode.

What business problem is this standard trying to overcome?

The standard eliminates the many proprietary formats by providing one standardized file submission format to be submitted in a non non-real-time mode: allows a batch to contain claims from multiple pharmacies at a centralized site to multiple processors via a switch.

How is/could this standard be used in practical, day-to-day applications?

It allows a batch to contain claims from multiple pharmacies at a centralized site to multiple processors via a switch. This standard utilizes the Telecommunication Standard Version 3.2 or higher as the detail record, therefore supporting one parsing routine for real-time or batch transmissions.

To whom is this standard useful (i.e. target markets)?

Anyone who wants to communicate an electronic pharmacy transaction.

Billing Unit Standard Implementation Guide

Due to the number of processors, fiscal intermediaries, plan administrators, and Medicaid programs, the billing unit standard was created to promote a “common billing unit language” for the submission of prescription claims.

The principal rule of the standard is that there are only three billing units necessary to describe any and all drug products. These billing units are "each", "ml", and "gm". The use of "tablet", "capsule", "kit" and others is not appropriate, since these are dosage forms or package descriptions. Breaking billing units into dosage forms does not add value to the model and violates the goals of the standard. Whether an "each" refers to a tablet, a capsule, a suppository, or a transdermal patch, the price will be the same for each billing unit. Once this definition is in place, the remainder of the standard describes how the various types of pharmaceutical products fit into one of the standard billing units.

To whom is this standard useful (i.e. target markets)?

Anyone in the health care delivery industry
 Pharmacies and pharmacists
 Manufacturers
 Payers/processors
 HCFA
 Wholesalers/distributors
 Pricing compendia
 Billing agents
 Software vendors
 EMR
 Physicians

What business problem is this standard trying to overcome?

Billing unit inconsistencies within the health care delivery industry
 Incorrect reimbursement
 Difficulties defining what constitutes a billing unit

How is/could this standard be used in practical, day-to-day applications?

Provide a consistent and well-defined billing unit for use in pharmacy transactions
 Provide a method to assign a standard billing unit
 Reduce the time it takes for a pharmacist to accurately bill a prescription and get paid correctly
 Provides a standard billing unit for use in calculation of accurate reimbursement
 Provides a standard size unit of measure for use in DUR

Data Dictionary

The document contains names, definitions and other information on all of the data elements used in all NCPDP Standards. The definitions support the various file and telecommunication formats that have been approved by the NCPDP membership.

The data element definitions should be used by all persons who want to know when, where and how specific data elements are used in the approved file formats.

What business problem is this standard trying to overcome?

The Data Dictionary provides the information on the specific data elements for all of NCPDP's standards.

How is/could this standard be used in practical, day-to-day applications?

Assists in the seamless implementation of NCPDP standards.

To whom is this standard useful (i.e. target markets)?

Anyone who wants to communicate an electronic pharmacy transaction.

Please see the External Code List for a list of value codes with descriptions for data elements used within specified NCPDP Standards.

Please see within this document the **Data Dictionary /ECL/ASC X12N Version** column for use of the appropriate publication of the Data Dictionary and External Code List for applicable standards. The publication of a Data Dictionary is directly related to a version/release of a standard and that publication must be use for that particular version/release of the standard. The External Code List is republished with each new publication of the Data Dictionary but allows for use of the values from a certain publication date forward except where limited use is specifically stated.

Note: If you are looking for the NCPDP Adjustment/Reason Codes for payment information cited in the ASC X12N HIPAA implementation guides, these are called "Reject Codes" in NCPDP vernacular. The codes are contained in the appendix of the External Code List – "Telecommunication Reject Codes".

External Code List (ECL)

The External Code List is a list of value codes with descriptions for data elements used within specified NCPDP Standards. The actual data elements appear in the main Data Dictionary. The codes with descriptions appear in the **External Code List** document. A reference to the ECL document is made in the Values column of the Data Dictionary for applicable fields. Data Element values contained in the External Code List document may be added to, modified, and/or deleted by the submission of a Data Element Request Form (DERF). DERFs approved for such requests will result in a new publication of the ECL document and will not require a version/release change to applicable NCPDP Standards. (See Process Overview for External Code List)

Note: If you are looking for the NCPDP Adjustment/Reason Codes for payment information cited in the ASC X12N HIPAA implementation guides, these are called "Reject Codes" in NCPDP vernacular. The codes are contained in the appendix of the External Code List – "Telecommunication Reject Codes".

When a new standard or a new Version/Release of an existing standard is released, a publication of the ECL occurs that contains applicable additions and/or modifications of data elements and/or values for all affected standards. For a specific Version/Release of a standard, the ECL publications are upwardly compatible but not downwardly compatible.

For example, applicable field and value additions and modifications for Version/Release 10.0 of the SCRIPT Standard were made to the ECL publication of October 2006. Implementers of SCRIPT v10.0 cannot use ECL publications earlier than October 2006 since those data element and value additions and/or modifications would not be reflected in earlier ECL publications. Besides the October 2006 publication of the ECL, implementers of the SCRIPT v10.10 may also use later ECL publications that could reflect new data element values applicable to SCRIPT v10.10.

The table below reflects the initial publication release of the ECL for applicable NCPDP Standards and Implementation Guides and usage moving forward.

NCPDP Standards Version Usage by ECL Publication

Emergency Telecommunication External Code List Value Addendum

An ECL implementation process applied strictly to the Telecommunication Standard Version D.0 and above was developed by the Maintenance and Control (MC) ECL Implementation Task Group to facilitate consistent adoption of the approved ECL versions within a reasonable, workable timeframe, across all industry participants. An annual implementation is recommended and consideration of expedited implementation of regulatory-required values provided in the Emergency Telecommunication External Code List Value Addendum. New publications of the Addendum follow the ECL publication process (see the ECL Process Overview on the NCPDP website). The most current Addendum publication is available on the NCPDP website with the Data Dictionary and ECL publications.

Financial Information Reporting Standard Implementation Guide

The Financial Information Reporting is a process where by a patient, under one plan sponsor, has changed from one benefit plan PBM to another benefit plan PBM and point-in-time financial information is moved from the previous PBM to the new PBM. This information is necessary for the new PBM to accurately process claims and attribute plan balances and status for reporting to the plan sponsor. Specifically, under the Medicare Prescription Drug Benefit, Improvement and Modernization Act (MMA), when a patient changes to a new Part D plan during a plan year, the previous Part D plan is no longer the plan of record that is responsible for maintaining the current overall True Out-Of-Pocket (TrOOP) and Gross Covered Drug Cost balance for the patient for that plan year. The new plan then becomes the current plan that is responsible for maintaining the overall TrOOP and Gross Covered Drug Cost balance for the patient. These accumulated financial balances for the plan year need to be sent from the previous Part D plan to the new Part D plan. Patients may move between multiple Part D plans including moving back to one of the prior Plans. This standard addresses the industry need to standardize the exchange of this information between plans.

Formulary and Benefit Standard Implementation Guide

This NCPDP Formulary And Benefit Standard Implementation Guide provides a standard means for pharmacy benefit payers (including health plans and Pharmacy Benefit Managers) to communicate formulary and benefit information to prescribers via technology vendor systems. It enables the physician to consider the following kinds of information during the prescribing process, so that he/she could make the most appropriate drug choice for the patient.

- Information about which drugs are considered to be “on formulary,” and alternative medications for those drugs not on formulary.
- Limitations that may impact whether the patient’s benefit will cover a drug being considered (such as age limits, gender limits, step therapy rules, benefit-specific coverage exclusions, etc.)
- The cost to the patient for one drug option versus another.

Functional Profiles for Electronic Health Record (EHR) Systems

In order to facilitate the capture and sharing of point of care prescription and medication related clinical data by Electronic Health Record (EHR) systems in a standard manner across the Health Care Industry, the *EHR-S Standalone Electronic Prescribing Functional Profile* and the *Pharmacy/Pharmacist Provider Functional Profile* and the *Standalone Electronic Prescription EHR-S Functional Profile* were developed jointly by NCPDP and HL7. These profiles indicate which functions are required, desired or implemented for certain EHR systems, Health Care Delivery settings, or other purposes. The profiles detail functions of systems; rather than the usual transaction exchange implementation guides normally published by NCPDP. They will be used to support the development of interoperable EHR systems and the certification of those systems by the Certification Commission for Health Information Technology (CCHIT).

Manufacturer Rebates, Utilization, Plan, Formulary, Market Basket, and Reconciliation Flat File Standard and Implementation Guide

The NCPDP Manufacturer Rebate Utilization, Plan, Formulary, Market Basket, and Reconciliation Flat File Standard provides a standardized format for the electronic submission of rebate information from Pharmacy Management Organizations (PMOs) to Pharmaceutical Industry Contracting Organizations (PICOs). The five (5) file formats are intended to be used in an integrated manner, with the utilization file being supported by the plan and formulary files. However, any of the five (5) files may be used independently. The flat file standard layouts provide detailed information on the file design and requirements for each of the five (5) files.

To whom is this standard useful (i.e. target markets)?

Manufacturers and PBMs
Data vendors (e.g. NDC, Source Informatics)
Buying groups

What business problem is this standard trying to overcome?

Lack of standardization
Current use of multiple file formats
Large amount of data with large dollar impact

Standards Matrix

State Medicaid agencies
 Contracting folks administrations writers
 Marketing folks to be within loop
 Government programs
 Insurance companies, HMO's, etc.
 State pharmacy associations
 Chain/retail pharmacies
 Systems vendors
 PBMs
 Consultants

How is/could this standard be used in practical, day-to-day applications?

Provide standard electronic format to adjudicate rebate claims
 Improve/build good relations with trading partners
 Communication link ("common language")
 Keep customers happy by cutting down time for payment of rebates
 Build/improve trading partner relationships

Medicaid Subrogation Implementation Guide

The NCPDP Medicaid Subrogation Implementation Guide provides guidelines for the process whereby a Medicaid agency can communicate to a processor for reimbursement. The state has reimbursed the pharmacy provider for covered services and now is pursuing reimbursement from other payers for these services.

Medicaid Subrogation Version 3.0 Questions, Answers and Editorial Updates

This document provides a consolidated reference point for questions that have been posed based on the review and implementation of the NCPDP **Medicaid Subrogation Standard Implementation Guide Version 3.0**, and the Data Dictionary and External Code List only as they apply to Medication Subrogation. This document also addresses an editorial change made to the implementation guide in October 2010.

As members review the documents, questions arise which are not specifically addressed in the guides or could be clarified further. These questions are addressed in the Work Group 9 Government Programs meetings.

Editorial changes include typographical errors, comments that do not match a field value, a reference pointer in error.

Medical Rebates Data Submission Standard Implementation Guide

The NCPDP Medical Rebates Data Submission Standard provides a standardized format for health plans' rebate submissions to multiple manufacturers throughout the industry. Implementation of the medical also eliminates the need for manufacturers to create internal mapping processes to standardize unique data formats from each health plan or third party administrator.

To whom is this standard useful (i.e. target markets)?

Health Plans
Pharmacy Benefit Managers (PBMs)
Manufacturers

How is/could this standard be used in practical, day-to-day applications?

Provide standard electronic format to adjudicate rebate claims
Improve/build good relations with trading partners
Communication link ("common language")

What business problem is this standard trying to overcome?

Lack of standardization
Current use of multiple file formats

NCPDP XML Schemas

All of the NCPDP XML schemas are contained in an NCPDP XML zip file ("the file"). The initial publication of this file contains the transport, structures, datatypes, specialized, script, and ecl schemas. Publications of this file follow the versioning for standards with model-driven schemas ([see section "Versions in Model-driven Schemas"](#)). The NCPDP XML file is republished when any schema is modified or a new schema added.

Following the initial publication of the NCPDP XML File, schemas that are modified or added to subsequent NCPDP XML File publications will be displayed with an asterisk on the publication table below.

<i>Operating Rules for the ASC X12 270/271 Transactions in Electronic Prescribing v1.0</i>		2/2011		N/A

Operating Rules for Connectivity

This document provides for consistent implementation of necessary business rules and guidelines for the electronic exchange of information used in pharmacy and electronic prescribing industry exchanges for NCPDP standards and the ASC X12 Standards transactions that are not defined by a standard or its implementation specifications as adopted.

In addition to this guidance, NCPDP provides a ConnectivityBase.wsdl to be used as a base for connectivity implementation and a PayloadEnvelope.xsd. The PayloadEnvelope.xsd is to be followed for the exchange of NCPDP and ASC X12 transactions in the pharmacy and electronic prescribing industries. Other standards or transactions are considered out of scope. See the Connectivity document for use of these documents.

Post Adjudication Standard Implementation Guide

The Post Adjudication Standard Implementation Guide meets the industry need to supply detailed drug or utilization claim information after the claim has been adjudicated.

Client Groups, Pharmacy Benefit Managers (PBM's), Fiscal Agents, Vendors, and Administrative Oversight Organizations require the ability to share post-adjudicated pharmacy claim data. The data is used to support:

1. Auditing of services
2. Retrospective DUR review
3. Statistical reporting
4. Evaluation of Health Care
5. Evaluation of Contractor performance
6. Development and evaluation of Capitation rates
7. Payment reinsurance (stop loss) to contractors, and
8. Development of fee for service payment rates.

Prescription File Transfer Standard Implementation Guide

The Prescription File Transfer Standard Implementation Guide was developed to create file formats for the purpose of electronically transferring prescriptions between pharmacies. Traditionally, prescriptions are transferred orally from one pharmacy to another. While this is efficient on a single-prescription basis, transfers of large sets of prescriptions could not be accomplished in this manner. Therefore, a standard format was needed that would allow compliance with regulatory requirements for the transfer of a prescription while at the same time introducing economies of scale.

Risk Evaluation & Mitigation Strategies (REMS) Reference Guide

This guide is intended for use with the Telecommunication Standard Implementation Guide. The objective of the NCPDP *REMS Reference Guide for use with Telecommunication Standard (Version 5.1)* is to support a description of how a retail/community or other outpatient pharmacy can use Version 5.1 of the standard to support the registration verification, clinical appropriateness editing, counseling documentation, and/or dispensing activity reporting requirements for products with a REMS requiring “elements to assure safe use” (ETASU). The implementation describes the following scenarios

- Registration Verification via 5.1 Billing Transaction
- Counseling Documentation via 5.1 Billing Transaction

REMS Reference Guide	Ballot Info	DRAFT	Approved NCPDP	Approved ANSI	Comment	Data Dictionary /ECL/ASC X12N Version
<i>Risk Evaluation & Mitigation Strategies (REMS) Reference Guide v1.0</i>			Ø8/2Ø1Ø		for use with Telecommunication Standard Version 5.1	Not Applicable

SCRIPT Standard Implementation Guide

The SCRIPT document was developed for transmitting prescription information electronically between prescribers, providers, and other entities. The standard addresses the electronic transmission of new prescriptions, changes of prescriptions, prescription refill requests, prescription fill status notifications, cancellation notifications, relaying of medication history, and transactions for long-term care.

To whom is this standard useful (i.e. target markets)?

Pharmacies
 Chains, Independent, Internet, Mail Order, Long Term Care
 Pharmacy Buying Groups
 Pharmacy Software Vendors
 Wholesalers
 Manufacturers
 PBMs
 MCOs
 PBM s/w vendors
 Pharmacy Claims Processors
 Drug database vendors
 Physician Practice Management Systems
 Electronic Medical Records
 Prescription Writing and EDI vendors
 Internet portal vendors
 Medical Claims processors and systems
 Medical Member Organizations
 Pharmacy Organizations

What business problem is this standard trying to overcome?

Time/Quicker Response
 Can't reach physician/pharmacist
 Legible writing
 Medication errors
 Modifications
 Refill Communication
 Security
 Forgery (fake, modifications)
 Trackable
 Patient Compliance
 Right drug to the right patient at the right time
 Dual data entry

How is/could this standard be used in practical, day-to-day applications?

Participating parties would be able to communicate according to their schedule/availability.
 Reference Imp Guide sections on the introduction to transaction and use other categories/descriptions.
 See Imp Guide sections on "Transaction Discussion" and get MSG: Pharmacy System.

SCRIPT Standard Guidance Documents

- **NCPDP-HL7 Electronic Prescribing Coordination**

This document provides a consistent mapping that can be used to improve patient safety and enable semantic interoperability between e-prescribing standards by NCPDP and HL7. The document correlates relevant portions of the NCPDP SCRIPT Standard Version 4.2 and above and the HL7 Version 2.3 through 2.6 to facilitate e-Prescribing messages for new prescriptions, changes to prescriptions, refills (renewals), cancellation of a prescription, compliance notification, and the sharing of medication history information. The NCPDP SCRIPT Standard is the messaging standard used in the US for communicating prescriptions and related information electronically between prescribers, community pharmacies, and payers. HL7 medication orders are used by healthcare organizations, such as hospitals and acute care facilities, for both inpatient and outpatient information.

- **SCRIPT Implementation Recommendations v1.1** (Republication of April 2012)

This document provides recommendations expected to be followed by the industry for consistent and complete prescription transactions of the NCPDP SCRIPT Standard. As the electronic prescribing industry has matured, more robust requirements have been added to the transaction standards. It is recommended that a transaction that does not follow the recommendations be rejected as incomplete. These recommendations will be brought forward and it is anticipated that they will be reflected in future versions of the SCRIPT Standard. These recommendations provide a bridge to the future versions.

Signature Log

This one page form, which is used by pharmacies, is a standard signature log (third party insurance/counseling claim log). It can be pulled down from the website and copied as needed. The form is free of charge. This form has been requested in the past in paper form; NCPDP is making it available electronically.

Specialized Standard Implementation Guide

The Specialized Standard Implementation Guide document was developed for transmitting information electronically between prescribers, providers, and other entities. The standard addresses the electronic transmission of census information about a patient between a facility and a pharmacy, medication therapy management transactions between providers, payers, pharmacies, and other entities. It will include other transactions for electronic exchanges between these entities in the future.

See "[XML Standard](#)" information.

To whom is this standard useful (i.e. target markets)?

Pharmacies
 Chains, Independent, Internet, Mail Order, Long Term Care
 Pharmacists
 Facilities
 Payers
 Health plans
 PBMs
 Software vendors
 Clearinghouses

What business problem is this standard trying to overcome?

Electronic exchange of information to feed into electronic health care systems
 Reduction of duplicate entry
 Exchanging information for patient medication therapy management services and outcomes
 Time/Quicker Response

Table of Specialized Versions in Model-driven Schemas

Structured and Codified Sig Format

This NCPDP *Structured and Codified Sig Format Implementation Guide* is intended to standardize the portion of an electronic prescription containing the directions for use using existing, accepted electronic transmission standards, such as NCPDP SCRIPT, Health Level 7 (HL7) (such as messaging, or the Continuity of Care Document (CCD)), and ASTM Continuity of Care Records (CCR). This document is intended to facilitate communication between prescribers and pharmacists, to improve the efficiency of the prescribing and dispensing activities and to help reduce the opportunity for errors. This document may also be appropriate for other business cases where the Sig is used. The NCPDP *Structured and Codified Sig Format Implementation Guide* is not an ANSI-accredited Standard, and it is not intended to be. Organizations responsible for standards such as those above are expected to incorporate the contents and structure of this implementation guide into their standards.

Component of the SCRIPT Standard Version 10 Release 4 - May 2008. Sig Guidance was incorporated into the SCRIPT Standard Version 10.4 and above. Version 1.1 of the Structured and Codified Sig Format was released July 2011 with changes incorporated into the SCRIPT Standard Version 2011071.

Telecommunication Standard Implementation Guide

The Telecommunication Standard was developed to provide a standard format for the electronic submission of third party drug claims. The development of the standard was to accommodate the eligibility verification process at the point-of-sale and to provide a consistent format for electronic claims processing.

NCPDP recommends the use of a standardized format for electronic communication of claims and other transactions between pharmacy providers, insurance carriers, third-party administrators, and other responsible parties. This standard addresses the data format and content, the transmission protocol, and other appropriate telecommunication requirements.

Usage of a common transaction format brings advantages to participants in the pharmacy industry. There are significant advantages to both the Originator of the transaction and the Processor of the transaction by adopting this version of the standard, such as:

- Common syntax and dictionary
- Adaptability
- Reduced system development expense
- Reduced equipment requirements
- Reduced errors

Telecommunication Version D and Above Questions, Answers and Editorial Updates

This document provides a consolidated reference point for questions that have been posed based on the review and implementation of the NCPDP Telecommunication Standard Implementation Guide Version D and above, the Data Dictionary, and the External Code List. This document also addresses editorial changes made to these documents.

As members review the documents, questions arise which are not specifically addressed in the guides or could be clarified further. These questions are addressed in the Work Group 1 Telecommunication meetings.

Editorial changes include typographical errors, comments that do not match a field value, a reference pointer in error.

Uniform Healthcare Payer Data Standard Implementation Guide

The NCPDP *Uniform Healthcare Payer Data Standard Implementation Guide* is used by Client Groups, Pharmacy Benefit Managers (PBMs), Fiscal Agents, Vendors, and Administrative Oversight Organizations and State entities to share pharmacy claim data that is used to support statistical reporting, evaluation of healthcare, and State or regional reporting requirements. This standard should only be used for data submission to a state agency or to a state-sponsored healthcare payer data collection initiative.

Universal Claim Form

The Universal Claim Form provides a standard format for the paper submission of third party drug claims. The Universal Claim Form does adhere to the data elements found in the Telecommunication Standard and Data Dictionary. For information about the use of the form for multi-ingredient compounds, go to http://www.ncdp.org/standards_purchase.asp.

The Workers' Compensation/Property and Casualty Universal Claim Form provides a standard format for the paper submission of Workers' Compensation/Property and Casualty drug claims. This form was designed for payer's to quickly determine claim type, state of jurisdiction and process accordingly. The Workers' Compensation/Property and Casualty UCF supports the Telecommunication Standard Version D.0 and above, but can be used in today's business.

Manual Claim Forms Reference

This implementation guide was created to support the implementation of the Universal Claim Form and the Workers' Compensation/Property and Casualty Universal Claim Form that align to the Telecommunication Standard Implementation Guide Versions D.0 and greater. It provides the essential features of paper submission of claims and guidance information for completing and processing these forms. This version is no longer distributed and is replaced by Version 1 Release 1.

Universal Claim Form Purchase

The NCPDP Universal Claim Forms may be purchased from our vendor, CommuniForm. The forms can be ordered online at www.CommuniForm.com/NCPDP or (800) 869-6508. [Purchasing Questions](#) [UCF FAQs](#) CommuniForm supports the:

- "Credit Card" style form (old name DAH 3-97) (new name PUCFCC)
- "Version 5" continuous feed form (old name DAH 2PT) (new name (PUCF2PT)
- "Version 5" laser form (old name UCF L1) (new name PUCF1PT)
- "Version D.0" continuous feed form (PUCF-D02PT)
- "Version D.0" laser form (PUCF-D01PT)

Also Offered:

- Pharmacy Workers' Compensation/Property and Casualty laser form (WUCF-1PT) – Fall 2011

XML Standard

The XML Standard is an integral piece of the NCPDP XML-based standards. The XML Standard document provides the basis for XML-based transactions used in NCPDP and supports the general transactions that may be used in implementation guides.

Important Versioning for Model-Based Environment

The standard moves via date (CCYYMM) with a one-digit numeric sequence. This sequence will always be 1 unless two ballots for the same implementation guide are approved for publication at the same time. In this unique instance, there will be a sequence of 1 for the first publication approved on that date, and a sequence of 2 for the second publication approved on that same date.

The implementation guides for the XML Standard move via date (CCYYMM) with the same one-digit numeric sequence, with the same rules for the sequence.

Standards Matrix

The transport, datatypes, structures, specialized and script schemas move via date (CCYYMM) with the same one-digit numeric sequence, with the same rules for the sequence.

The ecl schema moves via date only (CCYYMM) with no one-digit numeric sequence. (NCPDP Dictionaries and external code lists are published quarterly reflecting all changes that quarter.)

Appendix A. Standards/Guides/Formats No Longer Maintained or Supported

Connectivity Standard Implementation Guide

This guide provides for consistent implementation of a uniform means of connectivity between trading partners for the purpose of electronic exchange of NCPDP standard transactions. It is based on the Council for Affordable and Quality Healthcare Committee on Operating Rules for Information Exchange (CAQH CORE) Connectivity Rule.

Compound Transaction Implementation Guide

The Compound Transaction Implementation Guide was intended to provide practical guidelines for software developers throughout the industry and to ensure a consistent implementation of the standard throughout the industry.

For information about implementing Compound Transactions in Telecommunication Standard Version 5 and above (or Batch Standard Version 1 Release 1 and above), please see the Telecommunication Implementation Guide Version 5.1, Version 5.6, and the Version 5 Editorial document.

Version 2 Release 0 - October 1997

The Compound Transaction Implementation Guide Version 2 was for the implementation of the Telecommunication Standard Version 4 Release 0.

Component of the Telecommunication Standard Version 5 Release 6 – August 2002. The Compound Transaction Implementation Guide was incorporated into the Telecommunication Standard Version 5.6 and is no longer a separately supported document.

Diskette Standard Format

The Diskette Billing Format was intended for processing prescription drug claims via eight-inch diskette. The billing format does not attempt to define the methodology used to create and submit floppy disks for submission to claims processors. The format does address an industry accepted standard format for billing and reimbursing prescription drug claims for pharmacy users. The diskette format incorporates standard data elements that have been defined by NCPDP.

Version 2 Release 0 - September 1993

The Diskette Standard Format has not been updated since 1993 and is no longer supported.

Member Enrollment Standard and Implementation Guide

The introduction of managed care concepts to Pharmacy Management Organizations (PMOs) required various business entities to actively monitor and support the flow of member eligibility information in an accurate and timely manner. The successful transfer and maintenance of this eligibility data provides the foundation for cost containment by limiting claim payment liability.

Eligibility information originates from a large variety of sources due to the diversity of companies providing prescription benefits in their medical insurance coverage programs. The record formats, and data elements supplied by the eligibility source provide a unique challenge to PMOs in the maintenance of these enrollment files.

This Standard was designed in a segment architecture to allow for variation dictated by the business partners using this information. The format is intended to be easily implemented, and provides flexibility for modifications based on new requirements for changes in technology (i.e., ANSI ASC X12N implementation). NCPDP recommends the use of this Standard for the transfer of enrollment information between business entities and enrollment administrators. The Member Enrollment Standard Format v2.0 supports the Telecommunication Standard Version 5.0.

Version 2 Release 0 - June 2000

The Member Enrollment Standard and Implementation Guide was last updated in 2000. With the naming of the X12 834 in HIPAA as the standard for Enrollment and Disenrollment, maintenance of the NCPDP Member Enrollment Standard was discontinued and is no longer supported.

ORDUR Application Manual

The purpose of this manual is to facilitate the performance of ORDUR as a component of an ECM system because inappropriate drug therapy can cause patient injury leading to the provision of additional health care services resulting in increased total health care expenditures. In an attempt to solve this problem, the U.S. Congress enacted federal legislation in 1990 that requires pharmacy providers that participate in state Medicaid programs to perform prospective drug utilization review (DUR) and to provide patient counseling before each Medicaid prescription is dispensed. Presumably, prospective DUR can identify and prevent drug therapy problems, using various drug, patient and provider databases that make up the DUR system. The Omnibus Budget Reconciliation Act (OBRA '90) required that outpatient prospective DUR be performed for all Medicaid patients by January 1, 1993. Under OBRA '90 and HCFA's guidelines, prospective DUR can be performed manually by the dispensing pharmacist or physician, as a component of his store's computerized drug delivery and screening software, or through an on-line real-time drug utilization review (ORDUR) program administered via a data modem by a third party claims processor.

Publication Date - October 1995

NCPDP responded to this legal mandate by developing an ORDUR manual to be used with the Telecommunication Standard Version 3 Release 2.

Component of the Telecommunication Standard Version C Release 2 – June 2006. The ORDUR Manual was incorporated into the Telecommunication Standard Version C.2 and is no longer a separately supported document.

Payment Reconciliation Payment Tape Format

The document is intended to provide guidance for the reconciliation of payments for claims. The NCPDP 3.0 Payment Reconciliation Standard defines the layout for the claims payment tape used to convey payment, adjustment, rejection, or the pending of submitted claims transactions by the processor/payer and the pharmacy services provider. This format supports the Telecommunication Standard Version 5.0.

Version 4 Release 0 - January 2002

The Payment Reconciliation Payment Tape Format was last updated in 2002 and is no longer maintained or supported.

Prior Authorization Implementation Guide

With the advent of federal and state Health Care Reform initiatives, NCPDP has developed a Prior Authorization Transaction Standard. To date, the prior authorization process has largely been a manual process for the pharmacist, the medical consultant, the processor and the client. The benefits of the standard include: the use in an interactive environment with either an immediate response or delayed response; includes the current claim format with the addition of the prior authorization fields in the optional portion for ease of implementation as well as allowing for the adjudication of the claim; eliminates the majority of paper prior authorizations and provides a standardized format for submittal of prior authorizations

For information about implementing Prior Authorization Transactions in Telecommunication Standard Version 5 and above (or Batch Standard Version 1 Release 1 and above), please see the Telecommunication Implementation Guide Version 5.1, Version 5.6, and the Version 5 Editorial document.

Version 1 Release 0 - June 1996 (Revised April 2000)

The NCPDP Prior Authorization Transaction Implementation Guide Version 1 is intended to provide a practical guideline for software developers throughout the industry as they develop and implement the Telecommunication Standard Version 3.4.

Component of the Telecommunication Standard Version 5 Release 6 – August 2002. The Prior Authorization Standard was incorporated into the Telecommunication Standard Version 5.6 and is no longer a separately supported document.

Professional Pharmacy Services (PPS) Implementation Guide

The document is intended to support the efficient documentation and transmission of information related to professional services provided by pharmacists.

The adoption and use of this standard in the industry will result in several beneficial effects, including (1) improved quality and continuity of care delivered to patients; (2) enhanced accountability of pharmacists and pharmacy provider organizations to their clients, and (3) the creation of an

electronic documentation and billing infrastructure to support the creation of efficient compensation mechanisms for the delivery of professional services by pharmacists to their patients who are enrolled in third-party pharmacy service benefit plans.

Version 1 Release 0 approved as a guide to be used with the Telecommunication Standard Version 3 Release 2.

Component of the Telecommunication Standard Version 5 and above - November 2003. The PPS Implementation Guide was incorporated into the Telecommunication Standard Version B.0 and above and is no longer a separately supported document.
